

Handwriting Workshop

Conducted by Ms. Deepika, Veda Handwriting Lab

The advancement of technology is leading to the demise of the essential skill of handwriting. Handwriting activates the brain more than keyboarding because it involves more complex motor and cognitive skills. Handwriting develops unique pattern in the brain and hence help with memory, fine motor skill development and improves expression.

A workshop on how to improve handwriting skills was conducted by Veda handwriting lab for the teachers of JMIS. Teaching handwriting is still an important part of students education and to equip the teachers with the skill of how to teach handwriting to students, the workshop was conducted.

Teachers also got acquainted with the various strokes and how to keep correct posture for good / legible handwriting.
